

Nuoxian Wang

WeChat&Tel: 13959288816 | Email: bosswnx@qq.com | GitHub: [bosswnx](https://github.com/bosswnx) | Website: bosswnx.xyz

Education

Nanjing University (985)	2025/09 – 2027/06 (Expected)
Master, School of Intelligent Software and Engineering, Software Engineering	
University of Science and Technology Beijing (211)	2021/09 – 2025/06
Bachelor, School of Computer and Communication Engineering, Internet of Things Engineering	

Skills

- Languages:
- Proficient: C/C++, Rust; Familiar: Python
- Research Interests:
- Linux Kernel, RISC-V SBI, Database Kernel

Experience

Tencent Cloud, Big Data OLAP R&D Intern	2026/05 – Present
Participated in the R&D of Tencent Cloud TCHouse-D (based on Apache Doris), designed and implemented extensions to the Doris daemon monitoring functionality.	
KernelSoft, OS R&D Intern	2024/01 – 2024/05
Participated in the R&D of the self-developed intelligent cockpit real-time operating system. Successfully ported procs-related features into the kernel, merged into the company’s internal mainline repository.	

Projects

SBI-Fuzz	2025/09 – Present
Individual research project. A fully automated fuzzing tool designed for RISC-V SBI bootloaders. It automatically generates test cases based on the interface definitions provided by the SBI specification and executes them using the QEMU emulator. Supports advanced features such as code coverage and seed mutation. Discovered two bugs in RustSBI.	
MiniOB	2024/09 – 2024/10
Entry for the <u>National College Student Computer Systems Capability Competition (OceanBase Database Competition)</u> , implementing a simplified database kernel. As the team leader, completed more than half of the tasks, covering basic features like update and advanced features like B+Tree, expressions, and functions. Achieved a perfect score in the preliminary round, ranking 19th nationally and 3rd in Beijing. GitHub: https://github.com/bosswnx/miniob-2024	
chaos	2024/01 – 2024/08
Entry for the <u>National College Student Computer Systems Capability Competition (OS Kernel Implementation)</u> . A Unix-like operating system kernel written in Rust based on Tsinghua University’s rCore project. Supports multi-processing, ext4 file system, and the VisionFive 2 platform. Won the National Second Prize. GitHub: https://github.com/bosswnx/chaos	
NJU ICSPA	2023/02 – 2023/05
A major lab under NJU-ICT(CAS) “One Student One Chip” initiative. Built NEMU (a simplified QEMU emulator) and Nanos-lite (a time-sharing OS with paging), covering RISC-V architecture and OS fundamentals.	

Awards

CSCC (OceanBase Database Competition)	Provincial 3rd Place	2024/12
CSCC (OS Kernel Implementation)	National 2nd Prize	2024/08
CCPC (Regional) Jinan	Bronze Medal	2023/12
ICPC (Regional) Nanjing	Bronze Medal	2023/11
MCM/ICM Mathematical Contest in Modeling	Honorable Mention	2023/02
